ASSERTIVE COMMUNITY TREATMENT (ACT)

The purpose of ACT is to provide a comprehensive program that's responsible for providing treatment, rehabilitation, and support services to individuals with severe and persistent mental illnesses. Those individuals receiving ACT services may be experiencing conditions typical of diagnoses such as schizophrenia, bipolar disorder and other serious mental illnesses and who have experienced multiple psychiatric hospital admissions either at the state or community level.

FAMILY SERVICES

Family services are intended to help children/youth, and their family and/or caregivers by preventing additional crisis situations. We will improve and maintain stable relationships by providing support services for children/youth receiving individual services and/or assisting in accessing appropriate community-based services.

INDIVIDUAL SERVICES

Our services are for individuals three years and older. These services are intended to meet the needs of those experiencing behavioral and/or emotional issues. Their functioning may be impaired and disruptive to family relationships, daycare, school, work and/or their community. For children, our focus is placed on the parental or caregiver relationship by helping the individual to improve coping skills and to provide support by improving the individual's behavior management skills through a team approach.

CRISIS INTERVENTION

Services are intended to resolve the current crisis, avoid a more intense or higher level of care, and prevent a future crisis. This may include attempts or threats of suicide, harm to others or self, a first-time acute or reoccurring rapid onset of emotional, behavioral, psychiatric, or substance abuse symptoms.

MEDICATION MANAGEMENT

Medication Management is intended to meet the needs of the individuals whose only needs are monitoring and support in managing of medications. The service is for individuals without ongoing treatment needs outside of medication-related services. However, there may be times when case management services are needed for additional support to ensure medical needs are met. These services are primarily provided at an office-based locations. However, services may also be provided at school, in the community, or via telemedicine.

TRANSITIONAL SERVICES

The major focus here is to provide flexible services that assist individuals in maintaining stability, prevention of further crisis and ensuring those individuals receive the appropriate level of care. This service is highly individualized, so the level of service intensity and length of stay is expected to vary depending on the individual's need. This service is available for up to 90 days.
